Subj: Additional Flow Control Timings

Document 00-343r1 specified the Flow control timings for Fast-160. During the discussion of the document a question was raised about the Flow control timings for slower speeds. It was decided to use the same timing as the pCRC signal. I did not revise the document to reflect this decision so the decision got lost.

I propose that we use the transmit/receive setup/hold numbers for the pCRC signal as the timing for Flow control at speeds slower than Fast-160.
