Obsolete CAP bit in SSC-2

(T10/01-281r0)

Proposal: Obsolete the CAP (Change Active Partition) bit in the Device Configuration Page (10h). The preferred method to change partitions is to use the LOCATE command. Obsoleting the CAP bit will eliminate the complexity of MODE SELECT behavior for changing partitions when applied to the explicit block address mode. A message stating the intent to obsolete the CAP bit was sent on 5/14/2001 with one reply in favor.
