Revision history

Revision 0: July 3, 2002 Original version

1 Introduction

This document is intended to spur discussion at the July CAP meeting about the requirements for SRP-2. Comments are solicited.

2 SRP-2 Protocol

- 2.1 Robust multiple channel operation
 - 2.1.1 Separation of data and control channels
 - 2.1.2 Multiple control channels providing high availability
 - 2.1.3 Multiple parallel data channels for high bandwidth

2.2 Write latency improvements

2.2.1 Send some write data with CDB

2.3 Generic login

2.3.1 Separate interconnect channel establishment from SRP login

3 SRP-2 Standard

3.1 New model clause

- 3.1.1 Less explanatory
- 3.1.2 Based on defining interconnect service interface

3.2 Support for emerging RDMA-enabled interconnects
