From: Rob Elliott, HP (elliott@hp.com)  
Date: 20 May 2004  
Subject: 03-240r3 SAS-1.1 Internal wide connector and cable

### **Revision history**

Revision 0 (2 July 2003) First revision

Revision 1 (8 April 2004) Updated to match SFF-8484 revision 0.3, which now has 6 sideband signals, and mention SFF-8485 (SGPIO) as an optional use for those sideband signals.

Revision 2 (28 April 2004) Changed G27 to G26 in table 999. Changed G297 to G29 in table 1000. Corrected table captions in figure 2. Fixed arrows in figure 4. Added wording options for sideband SGPIO requirements. Corrected SFF-8484 number in references and added SFF-8485.

Revision 3 (20 May 2004) Incorporated changes from 20 May SAS physical WG teleconference.

sff-8484r0.4 - Multi Lane Internal Serial Attachment Connector (Brian Miller, Amphenol)

sff-8485r0.3 - Serial GPIO (Rob Elliott, HP)

### **Overview**

A 4-wide internal cable and connector solution is being designed for connecting controllers (e.g. PCI cards) to backplanes. It is intended to be used in place of 4 SATA host connectors (on the controller) to 4 separate SATA cables to 4 SATA host connectors (on the backplane). This cable/connector is being proposed for both SATA II and SAS.

Figure 1 shows the connector. It follows the design of the SATA host connector. Either a round cable or a ribbon-like cable could be used.

**Figure 1 — 4-wide connector picture (from Amphenol)**

---

---

Editor's Note 1: The connector ended up with 6 sidebands rather than 4 as shown.

---

---

---

---

Editor's Note 2: SFF-8484 also defines a two lane interface. This proposal is not adding support for that into SAS-1.1. That could be proposed separately later on if needed.

---

---

The connector includes 4 high-speed serial channels and 6 sideband signals (in the middle). It is split into two tongues for stability.

SAS-1.1 should recognize this as a standard connector and define signal assignments for it. It should also define electrical characteristics for interoperability points at the connector - that is deferred to another proposal.

### **5.2 Passive interconnect**

#### **5.2.1. SATA cables and connectors [no changes]**

#### **5.2.2 SAS cables and connectors**

This standard supports external cabled, internal cabled, [internal wide cabled](#), and internal backplane environments.

---

---

Editor's Note 3: considered calling these narrow cabled vs. wide cabled, but the narrow environment sometimes has two physical links, which is sort of wide. Could use 4x rather than wide, but then the 2x SFF-8484 variant would cause confusion.

---

---

Figure 42 shows a schematic representation of the cables and connectors defined in this standard to support an external [cabled](#) environment.

[figure 42 not shown]

Figure 42 — SAS cables and connectors - external environment

Figure 43 shows a schematic representation of the cables and connectors defined in this standard for internal [cabled and internal backplane](#) environments.

[figure 43 not shown]

Figure 43 — SAS cables and connectors - internal [cabled and internal backplane](#) environments

[Figure 2 shows a schematic representation of the cables and connectors defined in this standard for the internal wide environment.](#)

**Figure 2 — [SAS cables and connectors - internal wide cabled environment](#)**

[The internal wide connectors have different pinouts for the controller side and the backplane side so one side's Tx signals are attached to the other side's Rx signals. Two controllers may also be attached together, provided all four physical links are used, since one side's physical link 0 is attached to the other side's physical link 3.](#)

[The internal wide connector contains 6 sideband signals which are crossed when attaching a controller to a backplane but are not crossed when attaching a controller to a controller.](#)

Table 21 summarizes the connectors defined in this standard.

**Table 21 — Connectors [table 21]**

Type of connector	Physical links	Reference	Attaches to	Physical links	Reference
SAS plug	2	5.2.3.2	SAS internal cable receptacle	1 or 2	5.2.3.3
			SAS backplane receptacle	2	5.2.3.4
SAS internal cable SATA-style signal cable receptacle	1	ATA/ATAPI -7 V3	SATA-style host plug	1	ATA/ATAPI -7 V3
SAS internal cable receptacle	1 or 2	5.2.3.3	SAS plug	2	5.2.3.2
			SATA device plug	1	SATA
SAS backplane receptacle	2	5.2.3.4	SAS plug	2	5.2.3.2
			SATA device plug	1	ATA/ATAPI -7 V3
<a href="#">SAS internal wide receptacle</a>	<a href="#">4</a>	<a href="#">5.2.3.x</a>	<a href="#">SAS internal wide cable plug</a>	<a href="#">4</a>	<a href="#">5.2.3.y</a>
SAS external cable plug	4	5.2.3.6	SAS external receptacle	4	5.2.3.7
SAS external receptacle	4	5.2.3.6	SAS external cable plug	4	5.2.3.6

The SATA device plug connector (e.g., used by a SATA device) may be attached to a SAS backplane receptacle connector or a SAS internal cable receptacle connector, connecting the primary signal pairs and leaving the secondary signal pairs unconnected.

See SFF-8223, SFF-8323, and SFF-8523 for the connector locations on common form factors.

## 5.2.3 Connectors

### 5.2.3.1 Connectors overview

SAS connectors should be marked with the SAS icon (see Annex L).

### 5.2.3.2 SAS plug connector

SAS target devices supporting internal environments shall use the SAS plug connector. The SAS plug connector is defined in SFF-8482. It attaches to a SAS internal cable receptacle connector or a SAS backplane receptacle connector.

Table 22 defines the pin assignments.

### 5.2.3.3 SAS internal cable receptacle connector

SAS internal cables shall use a SAS internal cable receptacle connector on the SAS target device end. The SAS internal cable receptacle connectors are defined in SFF-8482. The single-port version attaches to either:

- a) a SAS plug connector, providing contact for the power pins and only the primary physical link; or
- b) a SATA device plug connector, providing contact for the power pins and the primary physical link.

The dual-port version attaches to:

- a) a SAS plug connector, providing contact for the power pins and only the primary physical link;
- b) a SAS plug connector, providing contact for the power pins and both the primary and secondary physical links; or
- c) a SATA device plug connector, providing contact for the power pins and the primary physical link.

Table 22 defines the pin assignments. The secondary physical link (i.e., pins S8 through S14) is not supported by the single-port internal cable receptacle.

#### 5.2.3.4 SAS backplane receptacle connector

SAS backplanes shall use the SAS backplane receptacle connector. The SAS backplane receptacle connector (see SFF-8482) attaches to either:

- a) a SAS plug connector, providing contact for the power pins and both primary and secondary physical links; or
- a) a SATA device plug connector, providing contact for the power pins and the primary physical link.

Table 22 defines the pin assignments.

#### 5.2.3.5 SAS internal connector pin assignments

Table 22 defines the SAS target device signal assignments for pins in the SAS internal connector.

**Table 22 — SAS target device connector pin assignments**

[table 22 not shown]

SAS target device signal assignments, except for the addition of the secondary physical link when present, are in the same locations as they are in a SATA device. On cable assemblies, backplanes, or any other connection media, the Tx signal from one internal connector pair shall be connected to the corresponding Rx signal of the other internal connector pair (i.e., the TP+ signal pin of connector 1 shall connect to the RP+ signal pin of connector 2) if there is an internal connector at both ends of the transmission media.

The TP+, TP-, RP+, and RP- signals are used by the primary physical link. The TS+, TS-, RS+, and RS- signals are used by the secondary physical link.

#### 5.2.3.x SAS internal wide cable plug connector

SAS internal wide cables shall use the SAS internal wide cable plug connector. The SAS internal wide cable plug connector is defined in SFF-8484. The SAS internal wide cable plug connector attaches to a SAS internal wide receptacle connector, providing contact for up to four physical links.

Table 999 and table 1000 define the pin assignments.

#### 5.2.3.y SAS internal wide receptacle connector

The SAS internal wide receptacle connector is defined in SFF-8484. The SAS internal wide receptacle connector attaches to a SAS internal wide cable plug connector, providing contact for up to four physical links.

Table 999 and table 1000 define the pin assignments.

### 0.0.0.1 SAS internal wide connector pin assignments

Table 999 defines how the connector signal pairs are used in internal wide connectors for controller applications using one, two, three, or four of the physical links. Internal wide cables should be labeled to indicate how many physical links are included (e.g., 1X, 2X, 3X, and 4X on each connector's housing).

**Table 999 — Controller physical link usage in SAS internal wide connector**

Signal	Signal pin to use based on number of physical links supported by the cable			
	One	Two	Three	Four
Rx 0+	S2	S2	S2	S2
Rx 0-	S3	S3	S3	S3
Tx 0-	S5	S5	S5	S5
Tx 0+	S6	S6	S6	S6
Rx 1+	N/C	S8	S8	S8
Rx 1-	N/C	S9	S9	S9
Tx 1-	N/C	S11	S11	S11
Tx 1+	N/C	S12	S12	S12
Sideband 0	SB14	SB14	SB14	SB14
Sideband 1	SB15	SB15	SB15	SB15
Sideband 2	SB16	SB16	SB16	SB16
Sideband 3	SB17	SB17	SB17	SB17
Sideband 4	SB18	SB18	SB18	SB18
Sideband 5	SB19	SB19	SB19	SB19
Rx 2+	N/C	N/C	S21	S21
Rx 2-	N/C	N/C	S22	S22
Tx 2-	N/C	N/C	S24	S24
Tx 2+	N/C	N/C	S25	S25
Rx 3+	N/C	N/C	N/C	S27
Rx 3-	N/C	N/C	N/C	S28
Tx 3-	N/C	N/C	N/C	S30
Tx 3+	N/C	N/C	N/C	S31
SIGNAL GROUND	G1, G4, G7, G10, G13, G20, G23, G26, G29, G32			
Key: N/C = not connected				

---

Editor's Note 4: awaiting a version of SFF-8484 that names its signals. Assume for now that they are numbered 1 through 32 with S denoting signal pins, G denoting ground pins, and SB denoting the sideband pins in the middle.

---

[The sideband signals shall contain an SGPIO initiator interface \(see SFF-8485\).](#)

[Table 1000 defines how the connector signal pairs are used in internal wide connectors for backplane applications using one, two, three, or four of the physical links. Internal wide cables should be labeled to indicate how many physical links are included \(e.g., 1X, 2X, 3X, and 4X on each connector's housing\).](#)

**Table 1000 — Backplane physical link usage in SAS internal wide connector**

Signal	Signal pin to use based on number of physical links supported by the cable			
	One	Two	Three	Four
Rx 3+	S2	S2	S2	S2
Rx 3-	S3	S3	S3	S3
Tx 3-	S5	S5	S5	S5
Tx 3+	S6	S6	S6	S6
Rx 2+	N/C	S8	S8	S8

[The sideband signals shall contain an SGPIO target interface \(see SFF-8485\).](#)

## 5.2.4 Cables

### 5.2.3.6 SAS external cable plug connector

SAS external cables shall use the SAS external cable plug connector. The SAS external cable plug connector is defined in SFF-8470 as the 4x configuration with thumbscrews. No special SAS keying is provided. The

SAS external cable plug connector attaches to a SAS external receptacle connector, providing contact for up to four physical links.

Table 23 defines the pin assignments.

#### 5.2.3.7 SAS external receptacle connector

SAS devices with external ports shall use the SAS external receptacle connector. The SAS external receptacle connector is defined in SFF-8470 as the 4x configuration with thumbscrews. No special SAS keying is provided. The SAS external receptacle connector attaches to a SAS external cable plug connector, providing contact for up to four physical links.

Table 23 defines the pin assignments.

#### 5.2.3.8 SAS external connector pin assignments

Table 23 defines how the connector signal pairs are used in external connectors for applications using one, two, three, or four of the physical links. External cables should be labeled to indicate how many physical links are included (e.g., 1X, 2X, 3X, and 4X on each connector's housing).

**Table 23 — Physical link usage in SAS external connector**

[table 23 not shown]

SIGNAL GROUND shall not be connected to CHASSIS GROUND in the cable connector.

### 5.2.4 Cables

#### 5.2.4.1 SAS internal cables

SAS internal cables shall use a SAS internal cable receptacle connector on the SAS target device end and a SATA-style cable receptacle (see ATA/ATAPI-7 V3) on the SAS initiator device or expander device end. The power and READY LED signal connection is vendor specific.

A SAS initiator device shall use a SATA-style host plug connector (see ATA/ATAPI-7 V3) for connection to the SAS internal cable. The signal assignment for the SAS initiator device or expander device with this connector shall be the same as that defined for a SATA host (see ATA/ATAPI-7 V3).

Figure 44 shows destination signal assignments and a connection diagram for the SAS single-port internal cable.

[figure 44 not shown]

Figure 44 — SAS single-port internal cable assembly and destination pin assignments

Figure 45 shows destination signal assignments and a connection diagram for the SAS dual-port internal cable.

[figure 45 not shown]

Figure 45 — SAS dual-port internal cable assembly and destination pin assignments

#### 5.2.4.x SAS internal wide cables

SAS internal wide cables shall use a SAS internal wide cable receptacle connector on each end. One connector shall have its key on the other side, causing the Tx pins on one side to route to the Rx pins on the other side. The Tx signal from one connector shall be connected to the corresponding Rx signal on the other connector (e.g., a Tx (S2) of one connector shall connect to Rx (S27) of the other connector. The physical link number of that pin depends on the application).

Although the connector always supports four physical links, the cable may support one, two, three, or four physical links when used for controller-to-backplane applications. The cable shall support four physical links for controller-to-controller applications.

Figure 3 shows the SAS internal wide cable attaching two controllers.

**Figure 3 — SAS internal wide cable attaching controller to controller**

NOTE 2 - For controller to controller applications, all four physical links should be used, because one side's physical link 0 is the other side's physical link 3. If both sides just used physical link 0, they would not communicate. The sideband signals are also crossed.

Figure 4 shows the SAS internal wide cable being used to attach a controller to a backplane.

**Figure 4 — SAS internal wide cable attaching controller to backplane**

NOTE 3 - For controller to backplane applications, up to four physical links may be used. The sideband signals are not crossed.

#### 5.2.4.2 SAS external cables

The SAS external cable connectors are defined in SFF-8470 as the 4x configuration with thumbscrews. The external cable does not include power or the READY LED signal.

Although the connector always supports four physical links, the cable may support one, two, three, or four physical links.

On external cable assemblies, the Tx signal from one connector shall be connected to the corresponding Rx signal of the other connector (e.g., Tx 0+ (S16) of one connector shall connect to Rx 0+ (S1) of the other connector) (see 5.2.3.6).

SIGNAL GROUND shall not be connected to CHASSIS GROUND in the cable.

### **5.2.5 Backplanes**

Backplane designs should follow the recommendations in SFF-8460.
