To:T10 Technical CommitteeFrom:Jay Neer (Jay.Neer@Molex.com)Date:February 23, 2005Subject:SAS 1-1 Compact Connectors (Internal and External)

This proposal has been prepared in the style of SAS 1-1 Rev 8. Changes and additions to the relevant sections of 5.2.3 and 5.2.4 are identified.

SAS external compact cable plug	4	5.2.3.3.4	SAS external compact receptacle	4	5.2.3.3.5		
SAS external compact receptacle	4	5.2.3.3.5	SAS external compact cable plug	4	5.2.3.3.4		
SAS internal compact wide cable	4	5.2.3.4.4	SAS internal compact wide	4	5.2.3.4.5		
plug			receptacle				
SAS internal compact wide	4	5.2.3.4.5	SAS internal compact wide cable	4	5.2.3.4.4		
receptacle			plug				

Add to Table 22

5.2.3.3 SAS external connectors

SAS external cables shall use either the SAS external cable plug connector or the SAS external compact plug connector.

SAS devices with external ports shall use either the SAS external receptacle connector or the SAS external compact receptacle connector.

5.2.3.3.1 SAS external cable plug connector

SAS external cables shall use the SAS external cable plug connector. The SAS external cable plug connector is defined in SFF-8470 as the four lane free (plug) connector with jack screws. The SAS external cable plug connector shall not include keys and may include key slots. Key slots are not defined by this standard. The SAS external cable plug connector attaches to a SAS external receptacle connector, providing contact for up to four physical links.

Table 24 (see 5.2.3.3.3) defines the pin assignments.

Figure 61 shows the SAS external cable plug connector.

Figure 61 — SAS external cable plug connector

5.2.3.3.2 SAS external receptacle connector

SAS devices with external ports shall use the SAS external receptacle connector. The SAS external receptacle connector is defined in SFF-8470 as the four lane fixed (receptacle) connector with jack screws.

The SAS external cable receptacle connector shall not include keys and may include key slots. Key slots are not defined by this standard. The SAS external receptacle connector attaches to a SAS external cable plug connector, providing contact for up to four physical links.

Table 24 (see 5.2.3.3.3) defines the pin assignments.

Figure 62 shows the SAS external receptacle connector.

Figure 62 — SAS external receptacle connector

5.2.3.3.3 SAS external connector pin assignments

Table 24 defines the signal assignments for pins in SAS external cable plug connectors (see 5.2.3.3.1) and SAS external receptacle connectors (see 5.2.3.3.2) for applications using one, two, three, or four of the physical links. External cables should be labeled to indicate how many physical links are included (e.g., 1X, 2X, 3X, and 4X on each connector's housing).

Signal pin to use based on number of Signal physical links supported by the cable				umber of the cable
	One	Two	Three	Four

SIGNAL GROUND	G1 - G9			
CHASSIS GROUND	Housing			
Key: N/C = not connected				

Table 24 — SAS external connector pin assignments and physical link usage

SIGNAL GROUND shall not be connected to CHASSIS GROUND in the cable connector.

5.2.3.3.4 SAS external compact cable plug connector

The SAS external compact cable plug connector is defined in SFF-8088 as the four lane free (plug) connector with latch. The SAS external compact cable plug connector shall not include keys and may include key slots. Key slots are not defined by this standard. The SAS external compact cable plug connector attaches to a SAS external compact receptacle connector, providing contact for up to four physical links.

Table 24C (see 5.2.3.3.6) defines the pin assignments.

Figure 61C shows the SAS external compact cable plug connector.

5.2.3.3.5 SAS external compact receptacle connector

SAS devices with external ports shall use the SAS external compact receptacle connector. The SAS external compact receptacle connector is defined in SFF-8088 as the four lane fixed (receptacle) connector with latch.

The SAS external compact cable receptacle connector shall not include keys and may include key slots. Key slots are not defined by this standard. The SAS external compact receptacle connector attaches to a SAS external compact cable plug connector, providing contact for up to four physical links.

Table 24C (see 5.2.3.3.3) defines the pin assignments.

Figure 62C shows the SAS external compact receptacle connector.

Figure 62C — SAS external compact receptacle connector

5.2.3.3.6 SAS external compact connector pin assignments

Table 24C defines the signal assignments for pins in SAS external compact cable plug connectors (see 5.2.3.3.1) and SAS external compact receptacle connectors (see 5.2.3.3.2) for applications using one, two, three, or four of the physical links. External cables should be labeled to indicate how many physical links are included (e.g., 1X, 2X, 3X, and 4X on each connector's housing).

|--|

SIGNAL GROUND shall not be connected to CHASSIS GROUND in the cable connector.

5.2.3.4 SAS internal wide connectors

SAS internal wide cables shall use either the SAS internal wide cable receptacle or SAS internal compact wide cable plug connector.

5.2.3.4.1 SAS internal wide plug connector

SAS internal wide cables shall use the SAS internal wide plug connector. The SAS internal wide plug connector is defined in SFF-8484.

The SAS internal wide plug connector attaches to a SAS internal wide cable receptacle connector, providing contact for up to four physical links and six sideband signals.

Table 25 and table 26 (see 5.2.3.4.3) define the pin assignments.

Figure 63 shows the SAS internal wide plug connector.

Figure 63 — SAS internal wide plug connector

5.2.3.4.2 SAS internal wide cable receptacle connector

The SAS internal wide cable receptacle connector is defined in SFF-8484.

The SAS internal wide cable receptacle connector attaches to a SAS internal wide plug connector, providing contact for up to four physical links and six sideband signals.

Table 25 and table 26 (see 5.2.3.4.3) define the pin assignments.

Figure 64 shows the SAS internal wide cable receptacle connector.

Figure 64 — SAS internal wide cable receptacle connector 5.2.3.4.3 SAS internal wide connector pin assignments

Table 25 defines the signal assignments for pins in SAS internal wide plug connectors (see 5.2.3.4.1) and SAS internal wide cable receptacle connectors (see 5.2.3.4.2) for controller applications using one, two, three, or four of the physical links. SAS internal wide cables should be labeled to indicate how many physical links are included (e.g., 1X, 2X, 3X, and 4X on each connector's housing).

Table 26 — Backplane SAS internal wide connecto	r pin assignments a	and physical link usage
---	---------------------	-------------------------

The use of the sideband signals by a backplane is vendor-specific. One implementation of the sideband signals by a backplane is an SGPIO target interface (see SFF-8485). Other implementations shall be compatible with the signal levels defined in SFF-8485.

5.2.3.4.4 SAS internal compact wide cable plug connector

The SAS internal compact wide cable plug connector is defined in SFF-8087.

The SAS internal compact wide cable plug connector attaches to a SAS internal compact wide receptacle connector, providing contact for up to four physical links and six sideband signals.

Table 25CW and table 26CW (see 5.2.3.4.6) define the pin assignments.

Figure 63CW shows the SAS internal compact wide cable plug connector.

Figure 63CW — SAS internal compact wide cable plug connector

5.2.3.4.5 SAS internal compact wide receptacle connector

The SAS internal compact wide receptacle connector is defined in SFF-8087.

The SAS internal compact wide cable plug connector attaches to a SAS internal compact wide receptacle connector, providing contact for up to four physical links and six sideband signals.

Table 25CW and table 26CW (see 5.2.3.4.6) define the pin assignments.

Figure 64CW shows the SAS internal compact wide receptacle connector.

Figure 64CW — SAS internal compact wide receptacle connector

5.2.3.4.6 SAS internal compact wide connector pin assignments

Table 25CW defines the signal assignments for pins in SAS internal compact wide cable plug connectors (see 5.2.3.4.4) and SAS internal compact wide receptacle connectors (see 5.2.3.4.5) for controller applications using one, two, three, or four of the physical links. SAS internal compact wide cables should be labeled to indicate how many physical links are included (e.g., 1X, 2X, 3X, and 4X on each connector's housing).

The use of the sideband signals by a backplane is vendor-specific. One implementation of the sideband signals by a backplane is an SGPIO target interface (see SFF-8485). Other implementations shall be compatible with the signal levels defined in SFF-8485.

- The introductory text for internal wide cables is not applicable to both connectors, because the wide connector uses a receptacle on the cable side, and the compact wide uses a plug on the cable side.
- It may be possible to rewrite the usage to cover both variations of the wide connector, but in this proposal the text is duplicated with the relevant changes from receptacle to plug.
- Figures 67-70 are unchanged and represented by a rectangle in the following pages.

5.2.4.3 SAS internal wide cables

There are several -types of SAS internal wide cable defined, and two connector types (SFF-8484 internal wide and sff-8087 internal compact wide):

5.2.4.3.1 SAS internal wide cable usage

a) symmetric cable: SAS internal wide cable receptacle connectors on each end;

b) controller-based fanout cable: SAS internal wide cable receptacle connector on one end (i.e., the controller end) and four SAS internal cable receptacle connectors on the other end (i.e., the backplane end); and

c) backplane-based fanout cable: Four SATA-style signal cable receptacle connectors on one end (i.e., the controller end) and a SAS internal wide cable receptacle connector on the other end (i.e., the backplane end).

In the symmetric cable, one connector shall have its key on the opposite end of the other connector, causing the Tx pins on one end to route to the Rx pins on the other end. The Tx signal from one connector shall be connected to the corresponding Rx signal on the other connector (e.g., a Tx (pin 6) of one connector shall connect to an Rx (pin 27) of the other connector. The physical link number of that pin depends on the application).

Although the SAS internal wide cable receptacle connector always supports four physical links, the SAS internal wide cable may support one, two, three, or four physical links when used for controller-to-backplane applications. The cable shall support four physical links for controller-to-controller applications.

Figure 67 shows the SAS internal wide cable being used to attach a controller to a backplane.

FIGURE 67 - SAS internal wide cable controller to backplane

NOTE 8 - For controller to backplane uses, up to four physical links may be used. SIDEBAND signals on the controller are attached to the corresponding SIDEBAND signals on the backplane (e.g., SIDEBAND0 of the controller is attached to SIDEBAND0 of the backplane).

Figure 68 shows the SAS internal wide cable attaching two controllers.

FIGURE 68 - SAS internal wide cable controller to controller

NOTE 9 - For controller to controller uses, all four physical links should be used, because one controller's physical link 0 is attached the other controller's physical link 3. If both controllers used only physical link 0, they would not communicate.

NOTE 10 - For controller to controller uses, SIDEBAND signals on one controller are not attached to their corresponding SIDEBAND signals on the other controller (e.g, SIDEBAND0 of one controller is attached to SIDEBAND5 of the other controller).

Figure 69 shows the SAS internal wide controller-based fanout cable.

FIGURE 69 - SAS internal wide controller-based fanout cable

Figure 70 shows the SAS internal wide backplane-based fanout cable.

FIGURE 70 - SAS internal wide backplane-based fanout cable

5.2.4.3.2 SAS internal compact wide cable usage

a) symmetric cable: SAS internal compact wide cable plug connectors on each end;

b) controller-based fanout cable: SAS internal compact wide cable plug connector on one end (i.e., the controller end) and four SAS internal cable receptacle connectors on the other end (i.e., the backplane end); and

c) backplane-based fanout cable: Four SATA-style signal cable receptacle connectors on one end (i.e., the controller end) and a SAS internal compact wide cable plug connector on the other end (i.e., the backplane end).

In the symmetric cable, one connector shall have its key on the opposite end of the other connector, causing the Tx pins on one end to route to the Rx pins on the other end. The Tx signal from one connector shall be connected to the corresponding Rx signal on the other connector (e.g., a Tx (pin 6) of one connector shall connect to an Rx (pin 27) of the other connector. The physical link number of that pin depends on the application).

Although the SAS internal compact wide cable plug connector always supports four physical links, the SAS internal wide cable may support one, two, three, or four physical links when used for controller-to-backplane applications. The cable shall support four physical links for controller-to-controller applications.

Figure 6767CW shows the SAS internal compact wide cable being used to attach a controller to a backplane.

	FIGURE	<mark>6868</mark>	CW -	SAS internal compact wide cable attacl	ning to	contr	oller	

NOTE 9 - For controller to controller uses, all four physical links should be used, because one controller's physical link 0 is attached the other controller's physical link 3. If both controllers used only physical link 0, they would not communicate.

NOTE 10 - For controller to controller uses, SIDEBAND signals on one controller are not attached to their corresponding SIDEBAND signals on the other controller (e.g, SIDEBAND0 of one controller is attached to SIDEBAND5 of the other controller).

Figure 6969CW shows the SAS internal compact wide controller-based fanout cable.
