The conference call began at 1:00 pm CDT.

Reviewed the content of 05-190r0. Discussed several aspects of how to handle the ground positions in the cable. Ended up with a definition for cable assembly to be added and to give an option for contacts that carry ground to be connected in the cable assembly. Also decided to show the cable assembly having ground connections from the connector on one side to a connector on the other side.

Revisions will be made by rob Elliott and discussed on follow-up calls during the next two days. Meeting information for the calls has been posted to the T10 reflector and included below:
