Overview
During SAM-3 letter ballot (where 04-088 was incorporated), many uses of “SCSI initiator port” were changed to “I_T nexus.” A few more changes are needed.

Suggested changes
5.3.1 Status codes

TASK SET FULL. When the logical unit has at least one task in the task set for a SCSI initiator port and a lack of task set resources prevents accepting a received task from that SCSI initiator port into the task set, TASK SET FULL shall be returned. When the logical unit has no task in the task set for a SCSI initiator port and a lack of task set resources prevents accepting a received task from that SCSI initiator port into the task set, BUSY should be returned.

The logical unit should allow at least one command in the task set for each supported I_T nexus (i.e., for each SCSI target port, allow at least one command from each SCSI initiator port that has identified itself to the SCSI target port in a SCSI transport protocol specific manner (e.g., login) or by the successful transmission of a command).

Retry delay timer, when supported by a protocol, may provide the SCSI initiator port with more information on when the command should be retransmitted (see table 25).

If the UA_INTLCK_CTRL field in the Control mode page contains 11b (see SPC-3), termination of a command with TASK SET FULL status shall cause a unit attention condition to be established for the SCSI initiator port that sent the command with an additional sense code set to PREVIOUS TASK SET FULL STATUS unless a PREVIOUS TASK SET FULL STATUS unit attention condition already exists.

ACA ACTIVE. This status shall be returned as described in 5.8.2.2 and 5.8.2.3 when an ACA exists within a task set. The application client SCSI initiator port may reissue the command on the same I_T nexus after the ACA condition has been cleared.

TASK ABORTED. This status shall be returned when a task is aborted by another SCSI initiator port and the Control mode page TAS bit is set to one (see 5.6.3).
5.2.3 Retry delay timer codes

Table 1 — Retry delay timer [excerpts]

<table>
<thead>
<tr>
<th>Status code</th>
<th>Retry delay timer code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BUSY</td>

</tr>
<tr>
<td></td>
<td>FFEFh</td>
<td>The application client should stop sending commands on this I_T_L nexus.</td>
</tr>
<tr>
<td></td>
<td>FFFFh</td>
<td>The logical unit is not able to accept the command because it is servicing too many other initiator port T nexuses.</td>
</tr>
</tbody>
</table>
| TASK SET FULL | 0001h - FFEFh          | The initiator port application client should wait before sending another command to the logical unit on any I_T nexus until: 
                                                                 | a) at least the number of 100 milliseconds increments indicated in the RETRY DELAY TIMER CODE field have elapsed; or 
                                                                 | b) a command addressed to the logical unit on any I_T nexus completes. |

Editor’s Note 1: Straddle the BUSY column for the first three rows

5.6.1 Mechanisms that cause tasks to be aborted

If one or more tasks are cleared or aborted, the affected tasks are also cleared from the SCSI initiator ports in a manner that is outside the scope of this standard.

5.8.7 Unit Attention condition

If a REPORT LUNS command enters the enabled task state, the logical unit shall perform the REPORT LUNS command and shall not report any unit attention condition. For each logical unit accessible by the I_T nexus on which the REPORT LUNS command was received, any pending unit attention condition established for the SCSI initiator port associated with that I_T nexus as a result of a change in the logical unit inventory shall be cleared. Other pending unit attention conditions shall not be cleared.
