SUBJECT: T10/06-060r1, Features for ADC-2 and ADT-2

06-060 Revision 1

- Dropped item 1, closed item 12, and assigned item 28.
- Added item 33 and assigned to Paul Entzel.

06-060 Revision 0

- Reopened item 1 and tentatively assigned to Michael Banther.
- Assigned item 18 to Paul Suhler.
- Clarified title of item 25.

04-263 Revision 9

- Dropped items 16, 20, and 29.
- Added document numbers as available.

Revision 8

- Closed item 27, clarification of Buffer Offset fields in SCSI IUs.

Revision 7

- Added item 27, clarification of Buffer Offset fields in SCSI IUs.

Revision 6

- Dropped items 4 and 26.
- Assigned item 25 to Michael Banther.

Revision 5

- Added status of items.
- Listed individual assigned each item.
- Added WORM to media types to be reported (item 26).

Revision 4

- Priority of each feature.
- State machine changes.
- New IUs.

Revision 3:

- Add density override to RMC LU descriptor.
- Clarify interactions of RMC and ADC device servers, physical device, and DT device.
- Modify model section to allow automation and DT devices with no ADT ports.
- Specify method to prepare and to retrieve dumps.
- Consolidated redundant entries for automation firmware update.

Revision 2:

- Modified description of real-time clock to refer to proposal against SPC-x.

Revision 1:

- Investigate whether ADC should address failover in multi-port drives.

04-263 Revision 0:

- Change “Device Status” to “Device Statistics” log page to TARGET LOG PAGES well-known logical unit.
- Consider interaction of the VHF Data WRTP bit and WORM media

03-133 Revision 9:

- Address Device Status log page to TARGET LOG PAGES well-known logical unit.

Revision 8:

- Mechanism for automation device to update its firmware from a medium in a DTD via the ADT.
- Resolve how the local SMC device server handles INQUIRY for page 83h with association = 2 (target device).

Revision 7:

- Add support to ADC DTD Primary Port Status log parameter and DTD Primary Port mode descriptor for SAS and possibly iSCSI.

Revision 6:

- Simplification of retryable error recovery.

Revision 5:

- Smaller ADI connector

Revision 4:

- Added a section to this document for feature descriptions that are not available in either T10 proposals or minutes.
- Identification Descriptor sub-page for ADC Device Configuration mode page.

Revision 3:

- Real-Time Clock
- Volume Identifier

Revision 2:

- Automation initiated/mediated DTD diagnostics
- Automation firmware update from tape via a read buffer command

Revision 1:

- Control of sense data masking via mode page
- Added links to documents

Revision 0:

- Passthrough bridging
- Progress indication

General

In the development of Automation Drive Interface standards, ADC and ADT, a number of concepts were discussed which were of insufficient urgency to include in the first generation standards. This document lists those concepts and the affected standards, as well as the documents and meeting minutes which present the most fully developed presentation of the concepts.

1. 4 November 2003 e-mail from Michael Banther

Hi Paul,

I'd like to request an area for consideration in ADI-2. I think that we should investigate altering the definition of the ADC Node Descriptor sub-page (6.2.2.1 in ADCr06) to become an Identification Descriptor sub-page. The Identification Descriptor sub-page would provide a general facility to alter any Identification Descriptor reported in VPD page 83h by a DTD. If we cannot alter the existing sub-page and maintain backwards compatibility, I would like to see the introduction of a new Identification Descriptor sub-page with the intention of making the Node Descriptor sub-page obsolete in a future generation of the standard (no sooner than ADI-3).

Could you please add this subject to the list for ADI-2?

Thanks,

Michael Banther
