

FCP-4/FC-LS: Obsolete REC Address Identifier fields

(T10/06-211r0)

Dave Peterson, McDATA

The REC ELS currently contains an Originator S_ID field in the REC Request payload, and an Originator Address Identifier and Responder Address Identifier field in the LS_ACC payload. These fields are redundant with the S_ID and D_ID fields contained in the FC header. In addition they require address translation for Inter-Fabric Router implementations.

Proposal: Obsolete the Originator S_ID field in the REC Request payload, and the Originator Address Identifier and Responder Address Identifier fields in the LS_ACC payload.
