Subject: SPC-4 New ASC/ASCQs for LOGICAL UNIT ACCESS NOT AUTHORIZED

Overview

For various security related application situations there is a need to indicate via ASC and ASCQ a condition where the LU is not ready to accept READ/WRITE commands due to lack of appropriate authorization. (The requested ASC and ASCQ pair indicates a generic condition – it may happen in the future that the various security related applications will optionally request to add additional, more specific conditions of this type.)

Change to SPC-4

Add to Table 28 and Table D.1:

<table>
<thead>
<tr>
<th>ASC</th>
<th>XXh</th>
<th>YYh</th>
<th>D</th>
<th>T</th>
<th>L</th>
<th>P</th>
<th>W</th>
<th>R</th>
<th>O</th>
<th>M</th>
<th>A</th>
<th>E</th>
<th>B</th>
<th>K</th>
<th>V</th>
<th>F</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASCQ</td>
<td>Description</td>
<td>LOGICAL UNIT ACCESS NOT AUTHORIZED</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Where the value pair for XXh YYh is to be assigned by the SPC-4 editor.
