Subject: SPC-4 New ASC/ASCQs for LOGICAL UNIT ACCESS NOT AUTHORIZED

Overview

For various security related application situations there is a need to indicate via ASC and ASCQ a
condition where the LU is not ready to accept READ/WRITE commands due to lack of
appropriate authorization. (The requested ASC and ASCQ pair indicates a generic condition – it
may happen in the future that the various security related applications will optionally request to
add additional, more specific conditions of this type.)

Change to SPC-4

Add to Table 28 and Table D.1 :

```
ASC ASCQ D T L P W R O M A E B K V F Description                         _
XXh YYh   D T L P W R O M A E B K V F LOGICAL UNIT ACCESS NOT AUTHORIZED
```

Where the value pair for **XX**h **YY**h is to be assigned by the SPC-4 editor
