06-358r4 SAS-2 Zone configuration model (Tim Symons, PMC-Sierra)

Overview  
To enable and disable zoning in a zoning expander device there is a requirement for the device to be managed and configured to meet the requirements of a ZPSDS. This proposal is to allow the SMP ENABLE DISABLE ZONING function to be only processed when the zoning expander device is locked, and only originated by an active zone manager. The requirements of the function are unchanged, and the function becomes an SMP zone configuration function as defined in 06-358r4 SAS-2 Zone configuration model (Tim Symons, PMC-Sierra).

Table 202 – FUNCTION RESULT field
10.4.3.16 ENABLE DISABLE ZONING function

The ENABLE DISABLE ZONING function enables or disables zoning. This function is used to set the ZONING ENABLED bit in the REPORT GENERAL response. This SMP function shall be supported by SMP target ports in zoning expander devices (see 4.9). Other SMP target ports shall not support this SMP function. This SMP function shall only be processed if the zoning expander device is locked.

This SMP function shall only be processed if:

   a) the request is received from an SMP initiator port that has access to zone group 2 (see 4.9.3.2); or
   b) the request is received from any SMP initiator port while physical presence is asserted.
