Subject: Lost SET IDENTIFYING INFORMATION Parameter List Length requirement

r1 Corrects the reference to 06-221r3.

I believe that 06-221r3 incorrectly removed the following requirement from the PARAMETER LIST LENGTH field definition in the SET IDENTIFYNG INFORMATION command subclause.

A parameter list length of zero specifies that no data shall be transferred, and that subsequent REPORT IDENTIFYING INFORMATION commands shall return the INFORMATION LENGTH field set to zero for the specified information type.

This requirement should be added to the end of the paragraph defining the PARAMETER LIST LENGTH field in the SET IDENTIFYING INFORMATION command definition.
