Company number	tech/edit	Page	Sec/table/fig locator	Comment	Proposed Solution	Resolution	Status
QTM-rbw-36	T	53	Figure 13	So there's no way to return to A0 from F0, E0, or E1?		Figure 13 is simply an overview of the four states that are further specified in the subsequent figures 14, 15, 16, and 17. Entry to A0 occurs as specified in figure 14 (i.e., power on, logical unit reset, I_T nexus loss event with BAML=0 and BAM=0).	C
QTM-rbw-43	T	61	Table 10	Not all six severities are used in Table 10		AinP Change column heading to "Default severity"	C
QTM-rbw-46	T	64	Table 10	Should we add TA flags for data encryption/decryption errors?		AinP Deferred to SSC-4.	C
QTM-rbw-59	T	67	p3 4.2.17.4	In addition to the deactivation conditions for all TapeAlert flags (see 4.2.17.3), the device server shall activate	s/b ...shall deactivate...	A The device server shall deactivate TapeAlert flags 3Bh and 3Ch: a) upon processing of a LOAD UNLOAD command with a load bit set to one (see 7.2) that results in a not ready to ready transition; b) upon processing of a LOAD UNLOAD command with a load bit set to one (see 7.2), if both the medium and device server support MAM, that results in access to medium auxiliary memory only; c) upon processing of an autoload operation (see SPC-4) that results in a not ready to ready transition; d) when both the medium and device server support MAM, that results in access to medium auxiliary memory only; or e) upon the occurrence of a deactivation	C

QTM-rbw-73	T	72	4th, 4.2.21.3 para, 4th : sentence	If the device server is capable of determining that the encryption	s/b determining that the decryption	AinP Add a term and definition for logical block key and review the use of key, encryption key, and decryption key throughout the standard.	
QTM-rbw-78	T	73	last p 4.2.21.3	A device server that is capable of both determining if the encryption	s/b For each encrypted block, a device server...	AinP Dave to reword appropriately: For each encrypted logical block, a device server that is capable of determining if the logical block key is correct for the encrypted logical block and validating the integrity of the logical block after decrypting it shall: 1) determine if the logical block key is correct for the encrypted logical block; and 2) validate the integrity of the logical block.	C
QTM-rbw-80	T	73	last 4.2.21.4 p, last s	This condition shall persist until the volume is demounted or a hard reset condition occurs.	Comment: Someone that has enough control to be setting encryption parameters and sending keys to try certainly has the ability to demount/remount a volume or instigate a hard reset. As such, is this mechanism really providing much value?	R Yes it is useful because it slows down the process of exhaustive search and provides an indication something is awry.	C
QTM-rbw-79	T	73	p1 4.2.21.4	encryption algorithm being broken	What does "being broken" mean?	A Change to: The use of such a mechanism may protect against an encryption algorithm being compromised.	C
QTM-rbw-85	T	75	p3, s2 4.2.21.6	The method by which keys and their associated vendor-specific key references are made available to the device server is outside the scope of this standard.	(Isn't this the SPOUT command and Tape Data Encryption protocol?)	R Sentence is technically correct.	C
QTM-rbw-89	T	76	last p 4.2.21.6	After a vendor-specific event, doesn't the physical device still need to release resources?		R Releasing resources is implicit in either changing or clearing data encryption paramters.	C

QTM-rbw-97	T	79	, p1 4.2.21.13 s1	What is plaintext?		AinP Some encryption algorithms allow or require the use of additional data which is associated with the key and the logical block, but which is not encrypted. It may be authenticated by being included in the message authentication code (MAC) calculations for the encrypted logical block if such a MAC exists, or unauthenticated by not being included in these calculations.	C
QTM-rbw-103	T	81	Note 13	NOTE 13 The SECURITY PROTOCOL IN command specifying the Tape Data Encryption security protocol and the Data Encryption Status page may be used to determine whether external data encryption control has been used to provide a set of data encryption parameters.	Limited to just provide, or includes establish, change, or control? (as in previous wording)	AinP (see SYM-022 also) Curtis to research and provide input. Accepted per 08-350r1.	
QTM-rbw-111	T	85	p1, s2 4.2.22.4	then the device server shall respond to a SECURITY PROTOCOL IN command specifying the Tape Data Encryption security protocol and the Data Encryption Status page with the PARAMETERS CONTROL field set to011b or 100b.	Respond with what?	A Change to: If control of data encryption parameters by this device server has been prevented by external data encryption control and the device server returns a Data Encryption Status page, then the PARAMETERS CONTROL field shall be set to 011b or 100b.	C
QTM-rbw-119	T	124	p1 7.4	The PREVENT ALLOW MEDIUM REMOVAL command (see table 44) requests that the logical unit enable or disable the removal of the medium.	Wouldn't it be more accurate to say 'removal of the volume' since that is the physical carrier of the medium? Could add a sentence to say removal includes volume.	A Also change initiator port to I_T_L nexus. Possibly change to "… medium (i.e., volume)." Dave to review.	
QTM-rbw-121	T	124	p1 after 7.4 table 45	The prevention of medium removal shall begin when any application client issues a PREVENT ALLOW MEDIUM REMOVAL command with a PREVENT field of 01b (i.e., medium removal prevented).	Suggest stating that it begins after device server successfully processingcommand	A	C
QTM-rbw-122	T	124	unordered 7.4)list item a) A	receipt of a PREVENT ALLOW MEDIUM REMOVAL command with a PREVENT field of 00b;	Suggest rewording as device server successfully processing command. Also need an 'or' after this A) item (indented list)	A	C

QTM-rbw-139	T	147	table 64 8.2.2	What is the parameter format for the log page specified in 8.2.2? Seems to be missing (e.g., what size are the parameters?)		R The size is implementation dependent and the log parameter has a length field.	C
QTM-rbw-143	T	156	ordered 8.2.5 lsit	1) the BARCODE field...	This should be a lettered list.	R The list is an ordered list.	C
QTM-rbw-148	T	159	p2 8.2.6.3 after table 79	The DEVICE SEVERITY CODE field is specified in table 9.	Table 9 specifies the TapeAlert flag severities; suggest dropping 'DEVICE' from this field name (as well as similar in table 82) to make common.	AinP Table 79: The DEVICE SEVERITY CODE field contains a severity code (see table 9). Fix typo in table 79 byte 2 and table 82 byte 2. Table 82: The VOLUME SEVERITY CODE field contains a severity code (see table 9). VOLUME INFORMATION LENGTH (n) s/b VOLUME INFORMATION LENGTH (n-1)	C
QTM-rbw-157	T	161	last p 8.2.6.4	1) a MAM attribute...	This should be a lettered list.	R It is an ordered list by design. But fix typo in item 1) and place if in front of each item.	C
QTM-rbw-152	T	161	p1 8.2.6.4	The VOLUME SEVERITY CODE field is specified	(see previous comment on table 79)	A See QTM-rbw-148.	C
QTM-rbw-155	T	161	p1 8.2.6.4 after table 84	The VOLUME IDENTIFICATION LENGTH field specifies the length of the volume identification descriptors.	The length of one descriptor or all of them?	A Table 82: remove VOLUME IDENTIFICATION LENGTH (n-5) and associated text.	C
QTM-rbw-159	T	164	p5,s2 8.2.7.2 after table 88	If the INTXN bit in the VHF data descriptor of the DT Device Status log page (see ADC-2) is set to one, the parameter shall report only code 00h (i.e., Recovery not requested).	This appears to be a problem, as this bit is controlled by another device server (i.e., ADC not SSC). How can one device server qualify the behavior of another? Need to move into physical device?	AinP Editor to specify that there shall be one instantiation of the DT Device Status log page for each SSC and ADC device server. Similar issue with TapeAlert response log page. Also fix typo in the "The PARAMETER CODE field shall be …" sentence.	
QTM-rbw-161	T	164	Table 89	Table 89 — Recovery procedures	How do these recovery procedure requests interact with the ADC recovery requests? May not want the ADC and SSC requests to conflict or collide. Model clause needed?	R This is an implementation issue. Capitalize first letter in table 89 codepoint 01h.	C
QTM-rbw-164	T	165	p1,s1 8.2.7.2 after table 89	and the RRQST bit in the VHF data descriptor of the DT Device Status log page (see ADC-2) is set to zero,	Same as previous comment on inter-device server interaction. Two more places following also.	R See QTM-rbw-159 and QTM-rbw-161.	C

QTM-rbw-179	T	191	p2,s2 8.4.5 after table 117	via the Automation Device Serial Number subpage, see ADC-3),	This is no longer a valid reference.	A Remove (e.g., …)	C
SYM-003	T	1	Scope	The reference to the Inquiry field in item a) of the list is incorrect.	a) permit an application client to communicate over a SCSI service delivery subsystem, with a logical unit that declares itself to be a sequential-access device in the PERIPHERAL DEVICE TYPE field of the standard INQUIRY data (see SPC-3);	A	C
SYM-005	T	3	Normative 2 References	Add ADC-2, PKCS #1, ANSI X9.63, ISO/IEC 18033-2 to the list of references (ADC is referenced in 4.2.3 & Table 2, PKCS in 8.5.2.10.2, ECC & ANSI X9.63 in 8.5.2.10.3, ISO/IEC 18033-2 in 8.5.3.2.4.3)	Add references	A	C
SYM-006	T	5	Auxiliary 3.1.3 memory	Delete the definition of auxiliary memory. Wherever the term is used in the document its preceded by "medium" and there's already a definition for that.	Delete the definition.	R No change, current text allows for the addition of other types of auxiliary memory in the future.	C
SYM-007	T	7	3.1.44 medium auxiliary memory)MAM(	This definition should reference the definition in SPC-4.	An auxiliary memory residing on a medium that is accessible to the device server (e.g., a tape cartridge). See SPC-4.	A	C
SYM-008	T	7	page 3.1.51	The page definition should be the same as, and should reference, SPC-3.	page: A regular parameter structure (or format) used by several commands. These pages are identified with a value known as a page code. (see SPC-4)	R	C
QTM-pas-002	T	18	Foreword, 2nd .para	Refers to SAM-3. Is this correct?	SAM-4 ?	A	C
IBM-021	T	26		Comment= 3.1.56 reservation loss: An event caused by the release of a reserve/release method reservation (see SPC-2) or by the transition within the device server from the state where a persistent reservation holder exists to the state where a persistent reservation holder does not exist (see SPC-4).	Comment 1: add: A preempt of a reservation is not considered a reservation loss if a new reservation is created as part of that preempt. <<to distinguish between CORL and CORP>> Comment 2: Shouldn't this state where one of the reservation participants no longer is a part of the reservation? I am thinking of the case where a CORL is set and a single initiator from an RO type of persistent reservation is preempted. There seems to be a hole in the clear on reservation loss vs. clear on reservation preempt.	AinP, working group needs to review their implementations.	

HPQ-38	T	28	3.1.85	At 8.39 in. down and 0.26 in. from left SPC-4 refers to SSC for its definition of "volume". One reference is: "The VOLUME NUMBER field specifies a volume (see SSC-2) within the medium auxiliary memory. The number of volumes of the medium auxiliary memory shall equal that of the attached medium. If the medium only has a single volume, then its volume number shall be zero." This doesn't seem to match the SSC definition. Either SPC-4 or SSC-3 should change.		Editor to review	
HPQ-42	T	29	3.2	At 6.41 in. down and 0.34 in. from left Global: change SAM-3 to SAM-4		A	C
HPQ-48	T	33	4.2	At 7.35 in. down and 0.69 in. from left Add a section 4.2.x Removable media Include these points: - the RMB bit is set to one in Standard INQUIRY data (see SPC-4) - a unit attention condition is established whenever the media changes (e.g. with an additional sense code set to NOT READY TO READY CHANGE, MEDIUM MAY HAVE CHANGED) - the LOAD UNLOAD command (see 7.2) is used to add or remove the medium		AinP, proposal needed Accepted per 08-351r1	
QTM-rbw-17	T	34	p6 4.2.2	Ready is the state of the logical unit when medium access and non-medium access commands may be processed.	Aren't TUR, INQUIRY, REPORT LUNS, etc non-medium access commands? Is the logical unit Ready with no media mounted and able to process these commands?	Editor to review usage of ready state and provide input.	
HPQ-64	T	36	4.2.3	Pysical device introductory paragraph: "A physical device performs operations upon the medium" -- this wording implies that the physical device only performs operations but the physical device also contains modifiable settings that are shared between multiple device servers.	Recommend: "A sequential-access device contains one or more physical devices. A physical device provides storage for values that are shared between multiple device servers and performs operations upon the medium"	AinP	

HPQ-66	T	37	figure 8 4.2.3	Under the top right box for the ADC device server The ADC device server is optional for SSC devices so the relationship should be 1 to 0..1 instead of 1 to 1.		A	C
HPQ-81	T	46	Table 4.2.12.3 4	At 4.73 in. down and 0.23 in. from left The information sense data descriptor needs to end with byte 11 not byte 10.		A, add reserved byte after byte 2	C
QTM-rbw-28	T	48	4.2.13.2 unordered list after table 6	c) the medium is an archive tape	Definition or reference for 'archive tape'?	A Change to ""… archive tape (see 4.2.20) …"	C
SYM-019	T	54	4.2.21.5 Keyless copy	This section should identify: a) How an application client determines that a Logical Unit has the capability to act as a KCSLU or a KCDLU; b) How an application client enables or disables this capability;		Kevin and Roger to research and provide input (see minutes for action items). Part a) is to be included in IBM proposal. Part b) has been withdrawn.	
BRO-001	T	56	4.2.21.6	Resolve editors note. This editors note applies to the whole standard.	see note	Editor to provide input.	
BRO-002	T	60	4.2.21.11	Resolve editors note. This editors note applies to the whole standard.	see note	Editor to provide input.	
SYM-023	T	61	4.2.22 External data encryption control	The interaction between this feature and the encryption mode locking defined in 4.2.21.11 needs to be defined. Specifically, can a lock be placed when the data encryption paremeters are under external control?		A Add lock bit to 4.2.21.8 first unordered list Table 133 remove the "not" in 011b and 100b	C
BRO-003	T	67	4.2.23.3	Resolve editors note. This editors note applies to the whole standard.	see note	Editor to provide input.	
HPQ-104	T	70	4.2.20.2	At 10.02 in. down and 0.45 in. from left What exactly is an archive tape? Should there be a definition in 3.1?		AinP, Paul S. to research if there are any issues with changing archive tape to WORM medium. Paul S: no issue with changing archive tape to WORM medium.	C
HPQ-141	T	80	4.2.22.2.2	Next to last a/b list item b/B - "report the encryption algorithm in the Data Encryption Capabilities page with the DISABLED bit set to one.." - The DISABLED bit has been removed	Should be "report the encryption algorithm in the Data Encryption Capabilities page with the DECRYPT_C field set to No Capability and the ENCRYPT_C field set to No Capability."	A	C
QTM-rbw-104	T	81	4.2.22.3.1	Numbered list should be lettered list.		A	C
HPQ-360	T	82	Table 15	Default setting requirement needs to be removed.	Remove the sentence: "This is the default setting for the data encryption parameters for encryption request policy."	A	C
HPQ-361	T	83	Table 16	Default setting requirement needs to be removed.	Remove the sentence: "This is the default setting for the data encryption parameters for decryption request policy."	A	C

QTM-pas-039	T	84	4.2.22.3.4 After last lettered list on page	A statement is needed about how the timeout value is set.	Add paragraph: "The means by which the data encryption parameters timeout value is set is beyond the scope of this standard."	A Change to: The data encryption parameters period settings (see 4.2.3) shall contain a data encryption parameters period time, a data encryption period timer, and a data encryption parameters period expired indicator.	C
IBM-076	T	86	p2 4.2.23.3	Comment= may ensure s/b ensures		A Verifying the key wrapper's signature allows a device server that supports public key cryptography for key wrapping to ensure the authenticity of the wrapped key.	C
EMC-001	T	192	8.5.3.2.1	From the spec it looks like if the SDK_C bit is set then the device supports supplemental decryption keys but the only way to determine how many is by setting the SDK's until you get a MAXIMUM NUMBER OF SUPPLEMENTAL DECRYPTION KEYS EXCEEDED error (Set Data Encryption Page for SECURITY PROTOCOL OUT - 8.5.3.2.1, p.192). It would be nice if SECURITY PROTOCOL IN could provide that info before the error occurs, perhaps in the Data Encryption Algorithm descriptor.		General agreement with the comment. Erich O. to research and provide input (see minutes for action item).	
BRO-004	T	195	8.5.3.2.1	Resolve editors note.	see note	Editor to provide input.	
QTM-rbw-188	T	202	Table 133	Table 133: 011b Data encryption parameters are not exclusively controlled by the automation/drive interface device server. 100b Data encryption parameters are not exclusively controlled by a management interface.	These should both be "are exclusively controlled"	A See XXX.	C
SYM-001	T	xviii	Foreword	In the second paragraph, the name of the field and the structure containing it are incorrect, and the reference should be to the published SAM-3.	This standard specifies the external behavior of a device server that defines itself as a sequential-access device in the PERIPHERAL DEVICE TYPE field of the standard INQUIRY data. This device type is known as a stream device. This standard conforms to ANSI INCITS 402-2005, SCSI Architecture Model - 3.	A	C

SYM-002	T	xviii	Foreword	The foreword contains a conformance statement that does not occur anywhere else in the text.	Add a sentence to the first paragraph of 1 Scope that reads "The definitions in this standard conform to the requirements of SAM-3."	A Also change references to SAM-4 and SPC-4.	C "The definitions …" is not quite right as more than just the definitions conform to the requirements of SAM-4. s/b This standard, implemented in conjunction with the requirements
BRO-005-L	T		global	Use of the term "physical device".	Provide better term reflect the functionality/behavior.	Editor to provide input.	
BRO-007-L	T		global	Use volume is mounted or medium is mounted.		Editor to provide input.	
BRO-006-L	T			Why is table 94 note b tied to Protocol Specific LUN?		Editor to provide input.	
BRO-008-L	T			In CAP working group, the format of the permission's bit table that came in with the CbCS proposal (Table 20 — Association between commands and CbCS permissions on physical page 68) was changed (see 08-145r1). That formatting change needs to be carried into SSC-3. The change is to change the 'v' to a '1' and add footnotes describing what a blank is.		A	
SYM-004	E	1	Figure 1	Correct the label "Shared Command Set (for all device types)" to match the text used in other standards.	Primary Command Set (for all device types)	A	C
SYM-009	E	7	Acronyms 3.2	Add the following acronyms	ADC Automation Device Control, PEWZ , SDK, RSA, ECC	A	C
SYM-010	E	15	Figure 3	The terms BOM & EOM (and BOP & EOP) are used throughout this section, but are never fully defined.	Spell out acronym on first usage.	R BOM and EOM are spelled out at first usage. See 4.2.2 paragraph 3.	C

SYM-011	E	17	Physical 4.2.3 Device	The reference SSC & ADC in item a) is very cryptic and needs to be expanded.	(e.g. where a physical device is associated with a auotmation device that can perform media movement, both a device server that implement the commands set defined in this standard and a device server that impements another command set such as ADC-2 may control the device);	A	C
SYM-012	E	18	Figure 8	The names in three of the boxes have been cropped.	Correct	A Changed to standard PDF setting.	C
SYM-013	E	20	4.2.5	Define PEWZ on first usage.		A	C
SYM-014	E	21	4.2.6 Partitions within a volume	Use (n) for the partition number to avoid confusion with Box & EOx.	Each partition (n) within a volume has a defined beginning-of-partition (BOP n), an early-warning position (EW n), and an end-of-partition (EOP n).	A	C
SYM-015	E	22	Logical 4.2.7.1 objects within a partition	Use (n) for the partition number to avoid confusion with Box & EOx.	The area between BOP n and EOP n….	A	C
SYM-016	E	52	Data 4.2.21.1 Encryption	Change the red text in this section to black.		AinP Will change to black when all editor comments are resolved.	C
SYM-017	E	52	Data 4.2.21.1 Encryption	The first sentence of this section is prone to giving the erroneous impression that a device can decypt the contents of a logical block on the media and replace the block on the media with unencrypted information, and thus needs clarification.	A device compliant with this standard may contain hardware or software that is capable of encrypting the data within logical blocks as those blocks are stored on the media, and decrypting the data within logical blocks as those blocks are read from the media, to provide security against unauthorized access to that data.	A	C
SYM-018	E	53	4.2.21.3 Reading encrypted blocks	"shall be vendor specific" is oxymoronic	"is vendor specific"	A	C
SYM-020	E	57	4.2.21.7 Saved Information	This section needs to be moved to the end of section 4.21 so that it occurs after concepts such as lock & key instance counter have been defined.	Move section	A	C
SYM-021	E	58	Data 4.2.21.8 encryption parameters	This section needs to be moved to the end of section 4.21 so that it occurs after concepts such as KAD & Nonce have been defined.	Move section	A	C
SYM-022	E	61	4.2.22 External data encryption control	This section should identify how an application client determines that a physical device has the capability for external data encryption control BEFORE it happens.		Accepted per 08-350r1	
SYM-024	E	66	4.2.22.5 External data encryption control error conditions	Change reference to ADC-2 for consistency with the rest of the document.	(see ADC-2)	AinP Changed to refer to ADC-3.	C

SYM-025	E	175	Data 8.5.2.4 Encryption capabilities page	I don't believe that this page "requests that information…." Us the same format as for the other pages.	Table 121 specifies the format of the Data Encryption Capabilities page. The page reports information on the set of data encryption algorithms supported by this device server. If external data encryption control is supported, then the set of data encryption algorithms reported by the device server may not include all of the algorithms in the set of data encryption algorithms supported by the physical device.	A	C
SYM-026	E	176	Table 124	There is a vertical divider missing between UKADF & AKADF	Insert	A	C
SYM-027	E	178	Table 127	Typo "ecryption"	Correct	A	C
SYM-028	E	178	Table 128	Show the code in this table using binary notation as per the other two tables on this page.	Correct	A	C
SYM-029	E	191	Table 142	Show the code in this table using binary notation as per the other two tables on this page.	Correct	A	C
SYM-030	E	201	8.5.4.1	typo "Pages in used"	Delete "in"	A	C
QTM-rbw-27	E	48	a) the format on the current medium is read-only by the device ; server		s/b ...medium is maintained as read-only...	A	C
QTM-rbw-29	E	49	- 4.2.13.3 Software write protection for the device server controls write protection for the device . server	(this statement seems circular; better wording?)		A Changed to "Software write protection controls write protection for the device server."	C
QTM-rbw-30	E	49	The - 4.2.13.3 state of each control bit shall be set to its default state after a logical unit . reset	Where is the default state specified?		R We purposely do not specify the default state for bits/fields if at all possible throught the SCSI standards. The default state is specified in the product spec.	C
QTM-rbw-31	E	50	— Table 7 Commands providing progress indication without changing ready state	Needs (Continued) for split table		A	C

QTM-rbw-34	E	51	When operating in explicit address , mode commands to read and write on the			s/b ...read from and write on...	A	C
QTM-rbw-33	E	51	When operating in implicit address mode, spacing operations and commands to read and write on			s/b ...read from and write on...	A	C
QTM-rbw-35	E	52	A common command containing a BAM bit	Should this be "a generic command"? (two places)		R No, a generic command is a command that is neither a read type or write type command. There are common commands that are read or write type (e.g., RECOVER BUFFERED DATA, FORMAT MEDIUM), thus generic command cannot be used.	C
QTM-rbw-38	E	60	Transition All:F0: This transition shall occur when a , power-on logical unit reset, ot I_T nexus loss			s/b of I_T nexus	A	C
QTM-rbw-39	E	61	TapeAlert flags fall into three categories of default severity (see). table 9	There are six categories shown in table 9.		AinP Table 10 specifies the TapeAlert flag default severity and only three are used. To clarifiy I reworded to "TapeAlert flag severity is specified in table 9. TapeAlert flags fall into three categories of default severity (see table 10)."	C
QTM-rbw-42	E	61	The condition should be logged and/or the operator informed	(missing period at end)			A	C

QTM-rbw-52	E	65	flags appears in the Information sense data descriptor			s/b information sense	A	C
QTM-rbw-51	E	65	that an informational exception has . occurred			s/b ...informational exception condition...	A	C
QTM-rbw-54	E	66	d) establishing a threshold value and a threshold met) criteria (tmc value for each TapeAlert log page parameter with the etc bit set to one			s/b TMC (small caps); ETC (small caps)	A	C
QTM-rbw-55	E	66	. de-activation	de-activation or deactivation? (consistency)			A deactivation	C
QTM-rbw-56	E	66	in the Information sense			s/b information sense	A	C
QTM-rbw-53	E	66	not wish to receive a unit attention condition (see) 8.2.3			s/b (see 8.2.3); and	A	C
QTM-rbw-57	E	66	the PCR field set to one	(is PCR a field or bit?)			A bit	C
QTM-rbw-61	E	67	are not affected by port events			s/b SCSI port events	A	C

QTM-rbw-60	E	67	execution of an autoload operation		s/b b) execution (i.e., format as item b of list)	AinP Resolved by QTM-rbw-59.	C
QTM-rbw-58	E	67	NOTE 7 The device server deactivating TapeAlert flags on any basis other than per I_T nexus, if the TAPLSD bit is , set to zero violates backwards compatibility with previous versions of . this standard		suggest: If the TAPLSD bit is set to zero, then if the device server deactivates TapeAlert flags on any basis other than per I_T nexus violates backwards compatibility with previous versions of this standard.	AinP Changed to "Backwards compatibilty with previous versions of this standard is violated if the taplsd bit is set to zero and the device server deactivates TapeAlert flags on any basis other than per I_T nexus."	C
QTM-rbw-62	E	67	requiring the application client to maintain at least one previously retrieved TapeAlert Response log page in order to detect . differences		Suggest converting this to an "e.g.," since this is not the only way of accomplishing this (and doesn't place a requirement on the client).	AinP Remove "… requiring the application client …"	
QTM-rbw-65	E	68	= Flag 1(; MSB, Byte 1 = Flag 64). LSB, Byte 8		s/b (i.e., Flag 1 = MSB, byte 1; Flag 64 = LSB, byte 8).	A	C
QTM-rbw-63	E	68	A value of 0h specifies that		s/b 0h indicates that	R	C
QTM-rbw-66	E	68	The bits specify all the TapeAlert flags that were set during the , previous load i.e., the bits(are "sticky" for). the load		s/b …that were set to one during... (and) (i.e., the bits remain set to one for the duration of the load).	A	C
QTM-rbw-67	E	69	A value of 0h specifies		s/b 0h indicates	R	C
QTM-rbw-68	E	69	when a registrants only or all registrants persistent		s/b ...or an all...	A	C
QTM-rbw-69	E	69		Need table footer on first page too.		A	C
QTM-rbw-70	E	70	commands by the devices . server		s/b device server	A	C
QTM-rbw-72	E	71	determine if medium		s/b determine if a medium	A	C

QTM-rbw-71	E	71	While in , WORM mode , WRITE WRITE , FILEMARKS , ERASE FORMAT , MEDIUM SET , CAPACITY and MODE SELECT commands		need to expand to WRITE(6), WRITE(16), WRITE FILEMARKS(6)/(16), ERASE(6)/(16).	R WRITE implies WRITE(6/16)	C
QTM-rbw-76	E	72	DECRYPT or MIXED but the data fails		s/b MIXED and the	R	C
QTM-rbw-75	E	72	encrypted block, shall cause		s/b encrypted block shall cause	R	C
QTM-rbw-74	E	72	or MIXED, but all of the keys		s/b MIXED, and all	R	C
QTM-rbw-77	E	73	A device server that is capable of distinguishing encrypted blocks from unencrypted blocks and has been configured to decrypt the data should perform at least one of the following for each encrypted block that is :decrypted		suggest: For each encrypted block that is decrypted, a device server that is capable of distinguishing encrypted blocks from unencrypted blocks and has been configured to decrypt the data should:	R	C
QTM-rbw-81	E	74	DECRYPTION MODE field is set to RAW		s/b field set to RAW	A	C
QTM-rbw-82	E	74	: is set to 10b		s/b is set to 10b, then:	A	C
QTM-rbw-84	E	75	A device server that supports encryption		s/b ...that supports data encryption...	A	C
QTM-rbw-86	E	75	and the device server experiences a reservation loss	what does it mean for a device server to "experience" a reservation loss?		AinP	C
QTM-rbw-83	E	75	The physical device also may have limited resources for storage of . keys	(strike this sentence, as it doesn't specify anything).		A	
QTM-rbw-88	E	76	key), at the physical device		s/b and the physical device	A	C

QTM-rbw-90	E	77	If an I_T nexus data encryption scope is set to PUBLIC it indicates the physical device does not have a saved set of data encryption parameters that were established by that I_T . nexus Device servers that support encryption		s/b An I_T nexus data encryption scope set to PUBLIC indicates that the physical device does not have a saved set of data encryption parameters that were established by that I_T nexus. Device servers that support data encryption	AinP	C
QTM-rbw-91	E	78	A physical device may have limited resources for storage of sets of data encryption parameters i.e., it may not(have enough resources to store a unique set of data encryption parameters for every I_T nexus that it is capable of). managing	This sentence should be removed since it doesn't specify anything. However, if not removed, then the 'may' should be changed since it is not granting permission to have limited resources.		A	
QTM-rbw-93	E	78	d) other -vendor specific data encryption . capabilities	(need to increase font size)		A	C
QTM-rbw-92	E	78	some values which may be changed		s/b values that may be	A	C
QTM-rbw-96	E	79	additional data which is associated		s/b data that is	AinP	C
QTM-rbw-94	E	79	an application client which cause the physical		s/b client that cause	A	C
QTM-rbw-98	E	79	but which is . not encrypted		s/b but that is not	AinP	C
QTM-rbw-99	E	79	It may be authenticated		s/b to what is 'it' referring?	AinP see QTM-rbw-97	C

QTM-rbw-95	E	79	The device server reports its capability with respect to nonce values		s/b The device server reports its nonce value capability in...	A	C
QTM-rbw-102	E	80	If a supported encryption algorithm has been disabled : then		s/b ...has been disabled, then:	A	C
QTM-rbw-100	E	80	-key associated data to be protected		s/b data to be authenticated	AinP see QTM-rbw-97	C
QTM-rbw-101	E	80	Some encryption algorithms allow or require the use of additional data which is associated		s/b Some data encryption... ...data that is...	AinP see QTM-rbw-97	C
