Project Proposal for a new INCITS Standard

SCSI Stream Commands - 4 (SSC-4)

May 8, 2008
1. **Source of Proposed Project**

1.1 **Title:** SCSI Stream Commands - 4.

1.2 **Date Submitted:** May 8, 2008.

1.3 **Proposing Group:** INCITS Technical Committee T10.

2. **Process Description for the Proposed Project**

2.1 **Project Type:** D - Development.

2.2 **Type of Document:** Standard.

2.3 **Definitions of Concepts and Special Terms:** none.

2.4 **Expected Relationship with Approved Reference Models, Frameworks, Architectures, etc.**

None, it is expected that this standard will be used in closed systems.

2.5 **Recommended INCITS Development Technical Committee:** T10.

2.6 **Anticipated Frequency and Duration of Meetings**

Technical Committee T10 meets on a regularly scheduled basis (see http://www.t10.org for the current meeting schedule). Specific task ad hoc groups are called as required between the regular meetings but their results are not binding.

2.7 **Target Date for Initial Public Review (Milestone 4):** May 2011.

2.8 **Estimated Useful Life of Standard or Technical Report:** 5 Years.

3.1 Description
The SCSI Stream Commands - 4 standard will be based on the SCSI Stream Commands - 3 standard that provides the model and command sets for the sequential-access device type. The model and command sets may be implemented on multiple transport protocols. The following items should be considered for inclusion into SSC-4:

1) continuation and enhancement of the sequential-access device type model;
2) continuation and enhancement of the explicit address command set;
3) continuation and enhancement of the implicit address command set;
4) continuation of TapeAlert standardization;
5) addition of a data protection model; and
6) other capabilities that may fit within the general application scope of this project.

3.2 Existing Practice and the Need for a Standard
The proposed project involves a compatible evolution of the present sequential-access device type model and command sets to provide for newly developed sequential-access device type products.

3.3 Implementation Impacts of the Proposed Standard

3.3.1 Development Costs
Members of T10 will provide the necessary resources. The T10 members will host the required meetings for development, provide for the necessary lab experiments, and provide the Technical Editor for the project.

3.3.2 Impact on Existing or Potential Markets
The nature of the proposed project is to provide for growth in the sequential-access device type product industry. This ensures that current investments in sequential-access device type products will have a stable managed migration path in the face of technological developments.

3.3.3 Costs and Methods for Conformity Assessment
The committee will consider the results of testing that may be available to the committee through the voluntary efforts of the various participants in T10. With this method, all costs are borne by the organizations of the various participants and have for the most part been mainly an adjunct of their normal development costs.

3.3.4 Return on Investment
ROI information is considered proprietary data by the member organizations, but members have stated that the ROI is expected to be large.

3.4 Legal Considerations

3.4.1 Patent Assertions
Calls will be made to identify assertions of patent rights in accordance with the relevant INCITS, ANSI, and ISO/IEC policies and procedures.

3.4.2 Dissemination of the Standard or Technical Report
Drafts of this document will be disseminated electronically. Dissemination of the final standard will be restricted, as the document becomes property of INCITS, ANSI, and/or ISO/IEC.

4. Related Standards Activities
