1. Opening Remarks
2. Attendance and Membership
3. Approval of Agenda
4. Report on status of the SCC standard
5. Discussion of SCSI-3 fault tolerant controller configurations proposal
6. Action Items
7. Meeting Schedule
8. Adjournment

Results of Meeting

1. Opening Remarks

George Penokie convened the meeting at 9:00 am, Tuesday, January 09, 1996. He thanked Jim MaGrath of Quantum for hosting the meeting.

This is a joint meeting of the X3T10 SCSI Controller Commands working group and the RAB Host Interface working group. The purpose of the group is to deal with interface issues related to using RAIDs. The study group will assess the issues and then formulate a strategy for dealing with them.

As is customary, the people attending introduced themselves. A copy of the attendance list was circulated for attendance and corrections.

It was stated that the meeting had been authorized by X3T10 and would be conducted under the X3 rules. Working group meetings take no final actions, but prepare recommendations for approval by the X3T10 task group. The voting rules for the meeting are those of the parent committee, X3T10. These rules are: one vote per company; and any participating company member may vote.

The minutes of this meeting will be posted to the SCSI BBS and the SCSI Reflector and will be included in the next committee mailing.

2. Attendance and Membership

Attendance at working group meetings does not count toward minimum attendance requirements for X3T10 membership. Working group meetings are
open to any person or company to attend and to express their opinion on the
subjects being discussed.

3. Approval of Agenda

The agenda developed at the meeting was approved.

4. Report on status of the SCC standard

The SCC standard rev 6 has exited it's second public review without
comment and will move to X3 for approval.

5. Discussion of SCSI-3 fault tolerant controller configurations
   proposal

Steve Sicola presented his proposal for fault tolerant controller
configurations. After his presentation a long discussion ensued about the
best solution to his problem. The following solution was agreed to:

-Create a new SCC service action that would report the world wide
  identifier assigned to all volume sets the addressed SCC device is aware
  of.
Note: Not all the volume sets the addressed SCC device is aware of need to
be configured by the addressed SCC device or have LUN_V values assigned by
the addressed SCC device.

-Create a new SCC service action that would assign a LUN_V value to a
  volume set identified by a world wide identifier. A SCC device should only
  allow volume sets that do not already have a LUN_V assigned to be assigned
  the LUN_V.

6. Action Items
a) Steve Sicola will prepare a revision of the SCSI-3 fault tolerant controller configurations proposal.

7. Meeting Schedule

The next meeting will be hosted by QLogic in San Diego at the Hyatt Islandia Hotel on March 12 from 9:00AM to Noon.

8. Adjournment

The meeting was adjourned at 12 noon.
