

To: X3T10 Committee (SCSI)

From: George Penokie (IBM)

Subject: SCC-2 Proposals

Attached are several changes that have been requested by incorporated into SCC-2:

These changes include:

- Adding a new redundancy method
- Indication that a redundancy group is overlaid
- Making it illegal to modify an object without specifying the object
- Allow a space to be configured to cover all like objects within a target in one service action
- Add disable, enable, and report disabled volume set service actions
- Add a report device identification service action

The above changes are attached.
