

Today's Single-ended and Differential Icons for SCSI

Proposed LVD and Universal Icons for SCSI

The top icons are documented in Annex H of SPI. The text items, 'SCSI', 'SE', and 'DIFF', are optional; if present, the text items may be presented in different fonts and sizes.

The bottom icons are proposed for LVD and Universal. Once again, the text items should be optional and, if present, these items should not be constrained as to font and size. The LVD icon should be used for those devices that only support LVD. The LVD/SE icon should be used for those devices that support either LVD or single-ended based on the voltages present on the DIFFSENS line.
