Subject: ASC/ASCQ for RBC Threshold Exceeded

Based on the disk-boys discussions about failure prediction reporting for RBC (Reduced Block Commands) and in consultation with Michael Bryan (RBC technical editor), I propose the addition of the following ASCQs under the 5Dh ASC:

    5Dh  01h    MEDIA FAILURE PREDICTION THRESHOLD EXCEEDED
    5Dh  nnh    DETAILED FAILURE PREDICTION INFORMATION (nn=10h-7Fh)
