Subj: Restrict QAS to Packetized

The current snooping for QAS does not handle all message sequences that can happen in non-packetized SCSI. The simplest solution is to restrict QAS to packetized.

This can be accomplished by removing the 0055h and 0455h message sequences from section 11.2.2.1 and removing the "110" bit combination from the protocol options in section 11.6.2.10.
