Subject: MMC-2 "CUE"

Deborah:

After reviewing the NCITS 333:19x draft proposed for "SCSI Multimedia Command -2 (MMC-2) I have a comment, maybe a question, on implementing the "CUE" command.

It appears that when the "CUE" sheet data form id CD-ROM XA, CD-1, that the only way to determine if Form 1 or Form 2 is to extract this information from the sub header. Is there a reason Data Form cannot specify Form type also?

Thks,

Frank Rutherford
