

IGNORE WIDE RESIDUE Message (Optional)

Byte	Value	Description
0	10 _H	Ignore Wide Residue message
1	n	number of invalid bytes

The IGNORE WIDE RESIDUE message shall be sent by a SCSI Target device whenever the number of valid bytes sent by that device during the last "A" REQ/ACK handshake of a data transfer phase is less than the negotiated SCSI transfer width. The second byte of the message indicates the number of invalid data bytes transferred.

The Ignore Wide Residue message shall be sent immediately following the data phase and prior to any other messages.
