Subject: Comment on Mode Select command

Section   7.1.8.1 on page 7-34 of the SCSI-2 draft document
X3T9.2/86-109, Revision 3 dated October 31, 1987.

BACKGROUND

It states, "The current values returned are:

   1) The parameter set in the last successful MODE SELECT
       command.

   2) The saved values if a MODE SELECT command has not been
       executed since the last power-on or hard RESET condition.

PROPOSAL

   The current values returned are:

   1) The parameter set in the last successful MODE SELECT
       command.

   2) The saved values if a MODE SELECT command has not been
       executed since the last power-on, hard RESET <u>or received</u>
       <u>BUS</u> <u>DEVICE</u> <u>RESET</u> <u>message</u> condition.
