Wichita, Kansas, 67226

Dear John

We just wished to advise you that we held an opening meeting with AMP in Harrisburg last week to discuss compatibility between the newly accepted high density standard and JAE's current TX7 which we presented at the Phoenix meeting. The object of our discussion of course being to bring our connector into compliance with the SCSI standard.

The meeting was held with Mr C. Ed Reynolds and Bob Whiteman of AMP, both of whom were extremely helpfull and cooperative in this endeavor and who obviously share the SCSI committee objectives of developing this new standard in an open professional atmosphere.

As a result of the meeting, we have been able to specifically identify the areas where our parts differ from the standard and what actions we must take to comply. In additions part dimensions were shared, and will be further, for inclusion in the spec envelop. I should add that our individual company connectors are face plug compatible with only minor exceptions. Our latches do however require some modification.

Finally, please be assured that we will continue to work in concert with the AMP Staff to bring about a compatible solution and also a completely documented standard.

JAE will be in attendance at the next meeting in April. We wish to be an active contributing member of the committee and to offer our corporate resources in whatever way we can be of service.

Yours Truly
