Att: John Lohmeyer Chairman X3T9.2

Dear John,

Cable assemblies incorporating our new the Daisy-Gen connectors are now being assembled by Stewart Connector and Thomas and Betts. We expect to have these cable assemblies in the hands of H.P. and Sun Micro with adequate time to perform the necessary tests to determine their fitness for inclusion in the SCSI-2 standard.

We expect that the performance of these cables will be identical to that of the single level (low density) SCSI-1 cable assemblies, thereby providing 110 ohm impedance and complete rearward compatibility.

This will serve notice that we intend to propose the Daisy-Gen for inclusion in the SCSI-2 standard to fulfill those internal applications unsuited to the fine pitch connector/cable assemblies.

Best personal regards,

David A. Hatch  
Manager of Advance Products  
and Development Engineering
