RE: ADDITION TO SET FEATURES COMMAND

As per my direction from the previous working group I request the following addition be made to the Set Features command (EFh). The addition of a feature 66h that prevents the resetting of the following features after a hard or soft reset.

1. All features set by the Set Features command (EFh)
2. Multiple count set by SMM command (C6h)

In keeping with the symmetry of the Set Features command I also request a CCh feature be added to disable the 66h feature.

Sincerely,

Steve Anderson
