Subject: Revision to description of partition
sizes in X3.131-199X, SCSI-2

Dear Mr. Lohmeyer,

In June of 1990 a request was made by Brian Earle of Eventide, Inc for an official interpretation of section 9.3.3.2. of ANSI Standards X3.131 SCSI-2 regarding page size descriptors in partition pages of the mode parameters, for sequential access devices.

This request was considered by Task Group X3T9.2 and Technical Committee X3T9 and concluded that Page Size Descriptors are to be included for each partition.

In response to the above request in August of 1990, it was pointed out that a recommendation would be made for changes to the description of section 9.3.3.2 to the final version of SCSI-2 to reflect the above interpretation.

As this change has not been implemented yet (see X3T9.2/86-109 Rev. 10h) and is consequently causing some confusion between different vendors implementing SCSI-2 specifications and as I understand the final version of SCSI-2 is not published yet, I would like to request for the changes recommended by X3T9 Task group and Technical committee in August of 1990 to be included in the final version.

Thank you for your consideration.

Best Regards,

George Anjargoli
