Bill Ham	HP
George Penokie	IBM
Mark Andresen	IBM
Galen Fromm	Molex
Alvin Cox	Seagate
Gerry Houlder	Seagate
Ashlie Fan	TycoElectronics
Vit Novac	Sun Microsystems

The conference call began at 1:00 pm CDT.

Reviewed the content of 05-190r1. After reviewing possible connections for the sideband signals on hybrid internal cables it was determined that the connection of sideband signals on hybrid cables is vendor specific. The hybrid cable connection for signals was determined to be correct as shown in 05-190r1. Minor editorial changes to figures were noted and will be included in r2. R2 is to be posted later on 5/10 and should be reviewed prior to 12 pm CDT on 5/11. If a conference call is needed to correct or discuss any other issues found in the r2 update, this needs to be posted before 12 pm CDT 5/11/05 for the call to take place. The 5/11 call is currently cancelled unless needed as a result of r2 reviews.

Reviewed the elimination of "media" in the PHY section and the resulting updates to 05-191r0 were forwarded to Rob for inclusion in the update. 05-191r0 had some translation issues and lost some information from the source document it was made from. Due to this issue I do not plan to update to r1.

The teleconference ended at 4:45pm CDT.
