From: Gerry Houlder, Seagate Technology <gerry.houlder@seagate.com>
Subj: Minutes of Oct. 14 SAS Interface Low Power Options Telecon
Date: Oct. 15, 2008

_____

This teleconference occurred on Oct. 14, 2008 at 10:00 am CDT. The teleconference was hosted by Gerry Houlder (Seagate) and attendees were as follows:

Kevin Marks (Dell)
Dan Colgrove (Hitachi GST)
Brad Bessmer (LSI)
Ken Paist (LSI)
George Penokie (LSI)
Gerry Houlder (Seagate)
Mark Evans (WD)

The agenda included:
08-015r5 (preliminary) – More Low Power Options

Gerry Houlder led the group through a review of 08-015 rev. 5 (preliminary). Changes requested include:
   a) editorial changes in text describing figures new1, new2, and new3;
   b) addition of time definitions to figure new2 in case we want to specify these times;
   c) standardize spelling of the new primitives as PM_ACK, PM_NAK, PM_REQ (SLUMBER), and PM_REQ (PARTIAL) (this could affect 08-206 and 08-249 as well);
   d) an expert was suggested for picking encodings for the new primitives; and
   e) suggestions for power management rules to be added to clause 7.10 were made.

Some other minor editorial changes were also suggested. A revision including all of the suggested changes will be posted to T10 web site before the Nov. T10 meetings.

The teleconference ended at 12:00 noon.
