5.1 SCSI Primary Commands Proposals

5.1.1 SPC-4: Group Persistent Reservations - Proposal (08-025) [Butt]

Kevin Butt asked that discussion of the proposal to define team reservations (08-025r3) be deferred to the next meeting.

5.1.2 SPC-4 SBC-3 SAS-2.1 Power condition enhancements (08-126) [Elliott]

Rob Elliott asked that the proposal to define a new power management model for SCSI (08-126r1) be deferred to the next meeting.

5.1.3 SPC-4 SBC-3 Adding more low power options (08-184) [Houlder]

Gerry Houlder presented a proposal to add a small number of new low power options in the Power Conditions Mode Page (08-184r6). The group requested several changes, including restructuring of the power conditions table into a series of subclauses.

Concerns were raised about defining the Standby1 state to be the lowest (not the highest) power consuming Standby state. The problem was that the Idle1 state was defined to be the highest power consuming Idle state. A straw poll was requested regarding continuing to use this nomenclature.

- 4 people favored keeping the current nomenclature.
- 4 people favored changing Standby1 to have the highest power consumption of Standby states.

Gerry was instructed to add appropriate SPL changes to the next revision of the proposal.

Gerry agreed to prepare a new revision for consideration at a future meeting or conference call.

5.1.4 Too much to do ... Not enough Progress Counters (08-263) [Weber]

Gerry Houlder presented a proposal to allow descriptor format sense data to contain descriptors with the Valid bit set to zero (08-321r1).

Curtis Stevens moved that the working group recommends that discussion of 08-321 be ended immediately and that backwards incompatibilities with previous standards argue against ever approving a proposal of this type. George Penokie seconded the motion. The motion 7:2:6.
