SUBJECT : PROPOSED SEQUENTIAL ACCESS DENSITY CODES

DATE : APRIL 24, 1987

Recently, the QIC Committee defined a number of tape formats to be implemented on 1/4-inch cartridge streaming tape drives. The probability is very high that these products will utilize the SCSI interface. Archive proposes that the following lines be added to Table 9-15, Sequential-Access Density Codes of the SCSI II Standard (X3T9.2/86-109):

Code Value	mm (inch)	Tracks	Density		Code	Type	Standard	Note
			bpmm	bpi				
10H	6.3 (.25)	18	394	(10,000)	GCR	C		1
11H	6.3 (.25)	24	709	(18,000)	NRZI	C		1
12H	6.3 (.25)	24	1,418	(36,000)	NRZI	C		1
