 SUBJ.: ATA Rev 2.5

I was surprised when I read table 2.5 of revision 2.5 of the ATA document. At the Harrisburg working group it was decided that support for Write Caching would be included in the document through the use of codes 02h and 82h.

The precise text change that would be required in 2.5 to accommodate this inclusion would be to insert into table 9-5 on page 34 of revision 2.5 the following:

- 02h Enable Write Caching *
- 82h Disable Write Caching *

This change would require revising the final document revision to 2.6.
